Been there, done that.....

The positive note is that (so far) I haven't gotten any hair caught in a
PL-259 connector yet.

Could someone give me a reference (books, mags, files, etc) on
etching my own PC Boards? I'm looking for information as to
the various methods available for etching as well as equipment
and step-by-step instructions. Any help will be appreciated.

This part of the circuit bothers me. I looks to me like SW1 is
controlling a short across the battery. Am I misreading your
notation?
